EDUCATION

University of Victoria

Bachelor of Computer Science Honours

Victoria, BC

September 2023 - August 2027

EXPERIENCE

Application Developer

May 2025 – August 2025

Noratek Solutions Inc.

- Shipped production features in Java, Grails, and PostgreSQL for CityReporter, a municipal management platform serving hundreds of cities and thousands of users across North America.
- Designed and deployed an **employee hours reporting feature end-to-end**, enabling municipal leaders to track field staff activity and generate council-ready reports directly from the platform.
- Engineered **Google OAuth SSO** integration from spec to production over a multi-week build, collaborating directly with enterprise client Bluebeam to let users sign in with their organization's credentials.
- Built an **automated nightly test suite** with Jenkins and shell-scripted schema resets, eliminating the 4 hours of morning re-runs that had been blocking QA from writing new tests.

Full-Stack Developer

September 2024 – Present

VikeLabs

Victoria, BC

- Lead full-stack development of a dining platform serving **20,000+ students** across web, API, and data layers.
- Designed **Flask APIs** linking a SQLAlchemy schema to a **Next.js** frontend with interactive maps and filters.
- Helped launch 2 new student project teams within VikeLabs, onboarding each on the stack, repo setup, and CI.
- Replaced manual menu entry with an automated UVic scraping pipeline.
- Reviewed **60+ PRs** and set up **GitHub Issues & Projects** for a 9–12 member team.

PROJECTS

Self Driving Car Model - AWS DeepRacer Hackathon 2024 Winner [🔗](#) | *Python, RL, AWS* November 2024

- Won **1st place out of 60 teams**, finishing within **0.048 seconds of the all time hackathon record** on the AWS re:Invent 2018 track.
- Engineered a custom **reinforcement learning reward function** combining multi-zone centerline tracking, asymmetric left-side biasing, and conditional speed rewards on straight segments to optimize the racing line.
- Designed a **reckless-driving penalty system** that scales reward down at high speed/high steering combinations, reducing crashes during training and producing smoother lap completion.

Draftly [🔗](#) | *Next.js, Tailwind CSS, Supabase, Anthropic SDK, Docker*

April 2026 – Present

- Developing an AI dev tool that turns UI sketches into production-ready frontend code using Claude's vision API.
- Engineered an iterative prompt engineering pipeline with a detailed system prompt, refining output through test-and-tune cycles on real sketch inputs to maximize layout and styling accuracy.
- Designed a **3-panel editor** with drag-and-drop image upload, live preview, and syntax highlighted code output, paired with **Supabase auth and row-level security** for saving past conversations.

Anchor | *Next.js, TypeScript, Tailwind CSS, Supabase, Claude API, Resend, Vercel*

March 2026

- Built a full-stack mental health support app for a target population of **3.5M+ North Americans with psychosis disorders** in a 4 person hackathon team.
- Integrated the **Anthropic Claude API** with a **system prompt** to deliver real time grounding conversations during psychosis episodes, with each conversation auto logging an episode entry on user confirmation.
- Wired **Resend email notifications** with consent based opt-in/opt-out, deep-linking users back into the app to start a grounding conversation directly from their inbox.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, HTML, Haskell, R

Libraries & Frameworks: React, Next.js, Node.js, Flask, Spring, Grails, Tailwind CSS, SQLAlchemy, BeautifulSoup, JUnit, Selenium, Pandas, NumPy

AI & ML: Claude API, Prompt Engineering, RAG, LangChain, Scikit-learn, Claude Code, Cursor

Databases: PostgreSQL, Supabase, SQLite, MySQL

Tools: AWS, Vercel, Docker, Jenkins, GitHub Actions, CI/CD, Git, Linux, Postman, Figma, REST APIs
